DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-85 and 150-163 drawn to a composition-of-matter comprising a polymer and an oxidizing agent, the method of treating a skin ailment using the said composition and method of preparing the said composition classified in class 514, subclass 241, and class 528, subclass 12.
- II. Claims 86-149, drawn to a medical device being designed and shaped onto the skin comprising a pharmaceutical composition and method of treating a skin ailment by applying a medical device classified in class 424, subclass 443, 77, 448, 447.

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation. For example, a skin patch delivery system comprising a pharmaceutical composition can be used to allow predetermined amount of the active released in a controlled way to the effected area.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Group I directed to a pharmaceutical composition, and Group II directed to a medical device designed and shaped onto the skin come under different classification. For example medical devices are classified in class 424, subclass 443, 77 etc. whereas pharmaceutical compositions are classified in class 514, subclass 241. Also the search required for medical devices such as skin patches is completely different from the search for pharmaceutical compositions.

In addition Group II consists of a vast variety of different medical devices such as skin patches, medicated gauge pads, pressure sensitive adhesives etc. Also the biocompatible polymers can have different physical structures such as gel, paste, sheet etc. Thus the search for all these medical devices and polymers places an undue burden on the examiner to perform a complete search of the defined area in both the patent and non-patent literature. Therefore because of the reasons given above, the restriction set forth is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one or more

Art Unit: 1617

claim remaining in the application. Any amendment of inventorship must be accompanied by request under 37 CFR 1.48(b) and by fee required under 37 CFR 1.17(i).

A telephone call to the applicant's agent to request an oral election was not made due to the complexity of the restriction.
